Notes: Intended for single use application. Safety risks associated with multiple uses.

A: Never exceed the maximum working load limit / load capacity. Doing so can result in product failure leading to injury or death.

B: Loading at an angle will significantly reduce a bolt's rated capacity; a 45 degree angle reduces it to just 1/4 of the stated rating. Never load at an angle greater than 45 degrees from the bolt center line.

C: When loading at angles, rated capacity is drastically reduced (for example, at 45 degrees, it's reduced to 1/4 of the original value).

D: The angle from the bolt centerline should never be greater than 45 degrees.

E: Always apply loads in the plane of the eye.

F: Ensure proper seating for shoulder lifting eyes before use, otherwise the working load limit will be reduced. If it does not bear firmly against the mating part, a steel washer or spacer may be required.
