## ECCL/CCC/CCT

## Column Caps

Column-to-beam connections often have multiple beams framing on top of a column. $\mathrm{L}, \mathrm{T}$, and cross-column caps provide design solutions for this application.
Material: 7 gauge or 3 gauge depending on size
Finish: Simpson Strong-Tie gray paint, also available in HDG Installation:

- Use all specified fasteners; see General Notes
- Bolt holes shall be a minimum of $1 / 32^{\prime \prime}$ to a maximum of $1 / 16^{\prime \prime}$ larger than bolt diameter (per 2015 and 2018 NDS 12.1.3.2)

## Options:

- Many combinations of beam and post sizes can be manufactured. Refer to worksheet T-C-CCLTC-WS at strongtie.com.
- The download shall be determined from the allowable loads for the unmodified product (see p. 91). The side beam can take a maximum of $40 \%$ of the download and shall not exceed $10,665 \mathrm{lb}$. The sum of the loads for the side beam(s) and main beam can not exceed the table load.
- Uplift loads do not apply for ECCL caps. For CCC and CCT, uplift loads from table apply for main beam only.
- The column width in the direction of the main beam width must be the same as the main beam width $\left(W_{1}\right)$.
- Specify the stirrup height from the top of the cap. The minimum side stirrup heights $\left(\mathrm{H}_{2}\right.$ or $\left.\mathrm{H}_{3}\right)$ is $61 / 2$ " ( $31 / 2$ " for 44 s ).
- The $L$ dimension may vary depending on the width of the side stirrup (W3 or $W_{4}$ ).
- See p. 91 for other dimensions.
- Column caps may be ordered without the column straps for field welding to a steel column. Specify "No Straps" when ordering. Weld by designer. Full loads apply for the beam and the post cap.

## Ordering Examples:

- A CCC66 with $W_{3}=5 \frac{112}{2}$ ", $\mathrm{H}_{2}$ and $\mathrm{H}_{3}=6 \frac{1}{2} / 2^{\prime \prime}$ is a CC66 column cap with $51 / 2^{\prime \prime}$ beams on each side with all beam seats flush.
- An ECCLR66 with $W_{3}=35 / 8^{\prime \prime}, \mathrm{H}_{2}=71 / 2^{\prime \prime}$ is an ECC66 end column cap with a $4 x$ beam on the right side (specify direction left or right for stirrup) and stirrup seat 1 " below the cap seat.

(right direction shown)

CCC

CCT

There are cost-effective alternatives for replacing column caps by using a combination of connectors. Designer must specify the options required. For column cap clearance, allow $3^{\prime \prime}$ for the hanger flange depth.

ECC and HWP
(top flange offset right)

## Ordering Multiple-Beam Column Caps

Ordering column caps incorporates several key steps that are important to ensure the highest allowable-load solution for your project.
For more information, refer to worksheet T-C-CCLTC-WS for bolted connections and worksheet T-C-CCQLTC-WS for Quick Install connections. See p. 2 of these worksheets for model numbers for common post and beam width combinations.
These worksheets are available at strongtie.com.

## CC/ECC/ECCU

## Column Caps (cont.)

These products are available with additional corrosion protection. For more information, see p.14. SS For stainless-steel fasteners, see p. 21.

1. Uplift loads have been increased for earthquake or wind loading with no further increase allowed. Reduce where other loads govern.
2. Downloads shall be reduced where limited by allowable loads of the post.
3. CC uplift loads do not apply to splice conditions.
4. Splice conditions with CCs must be detailed by the designer to transfer tension loads between spliced members by means other than the column cap.
5. Column sides are assumed to be aligned in the same vertical plane as the beam sides. CC4.62 models assume a minimum $3 \frac{112}{2}$ "-wide post.
6. Structural composite lumber columns have sides that show either the wide face or the edges of the lumber strands/veneers known as the narrow face. Values in the tables reflect installation into the wide face. See technical bulletin T-C-SCLCLM at strongtie.com for load reductions resulting from narrow-face installations.
7. Beam depth must be at least as tall as $H_{1}$.
8. CCO and ECCO welded to a steel column will achieve maximum load listed for the beam and the post cap as CC and ECC.

The steel column width shall match the beam width. Weld by designer.
9. All references to bolts are for structural quality through bolts (not lag screws or carriage bolts) equal to or better than ASTM A307, Grade A.
