# DSP/SSP/SP/SPH/RSP4/TSP/CS

#### Stud Plate Ties

This product is preferable to similar connectors because of (a) easier installation, (b) higher loads, (c) lower installed cost, or a combination of these features.

The stud plate tie series offers general solutions for connecting the stud to the top and bottom plates. All models can be used to make a connection to either the top or bottom plate, and several are suitable for double top plates and studs.

**Material:** DSP/SSP/SPH — 18 gauge; TSP/CS16 — 16 gauge; all others — 20 gauge

Finish: Galvanized. Some products available in ZMAX<sup>®</sup> coating. See Corrosion Information, pp. 12–15.

#### Installation:

- Use all specified fasteners; see General Notes
- TSP/DSP/SSP Sill-plate installation: fill all round holes
- TSP/DSP/SSP Top-plate installation: fill all round and triangle holes
- SP1/SP2 One of the 0.148" x 3" stud nails is driven at a 45° angle through the stud into the plate
- CS Slide the CS16 or CS20 strap underneath the mudsill with the appropriate length of strap protruding from the inside of the mudsill. See illustration on p. 281 for more details.
  - Each bend in the strap must be tight, and the strap must sit flush against the edge of the mudsill and the stud or sheathing
  - Bend strap one time only

Codes: See p. 11 for Code Reference Key Chart

### DSP/SSP/SP/SPH/RSP4/TSP/CS

## Stud Plate Ties (cont.)

These products are available with additional corrosion protection. For more information, see p. 14.

For stainless-steel fasteners, see p.21.

SD Many of these products are approved for installation with Strong-Drive<sup>®</sup> SD Connector screws. See pp. 348–352 for more information.

1. See pp. 266–267 for Straps and Ties General Notes.

2. SP1/SP2 - drive one stud nail at an angle through the stud into the plate to achieve the table load (see illustration).

3. RSP4 — see Installation details (1) and (2) for reference.

- 4. RSP4 F<sub>2</sub> is 225 lb. for Installation 1 and 245 lb. for Installation 2. F<sub>1</sub> load is 165 lb. for both installations.
- 5. Maximum load for SPH in southern yellow pine is 1,415 lb. for center loading and 710 lb. for side loading.
- 6. When cross-grain bending or cross-grain tension cannot be avoided in the members, mechanical reinforcement to resist such forces shall be considered by the designer.
- 7. For retrofit application, use CS16 and CS20. Total length of strap and total nail quantity are listed.
- 8. Use Side (eccentric) load when uplift loads are applied to only one face of the top plate.
- 9. Use Center (concentric) loads when uplift loads are applied at the centerline of the top plate, or where equal loads are applied to both sides of the top plate. Center loads should also be used for stud-to-bottom plate loads.
- 10. Order SPH4R and SPH6R for installation over 1/2" sheathing with a maximum DF/SP load of 1,360 lb. for center loading.
- 11. Fasteners: Nail dimensions are listed diameter by length. See pp. 21-22 for fastener information.

|  |              |              |               | (9) U.148 X 1 1/2   | (6) 0.148 x 3       |                      | 1,015 <sup>4</sup>  |                      |        |                |

1. See pp. 266–267 for Straps and Ties General Notes.

2. When cross-grain bending or cross-grain tension cannot be avoided in the members, mechanical reinforcement to resist such forces shall be considered by the designer.

3. Allowable loads for DSP installed to a rim board are 620 lb. (DF/SP) and 515 lb. (SPF/HF).

4. Noted values apply only to DF/SP members. For SPF values, multiply by 0.86.

5. Southern pine allowable uplift load is 520 lb.

6. Fasteners: Nail dimensions are listed diameter by length. See pp. 21-22 for fastener information.

Typical SSP Installed to Sill Plate (DSP similar for double stud)

Typical DSP Installed to Top Plate (SSP similar for single stud)

Typical TSP Installed to Top Plate
