# RCA-C Rigid Connector Angle for Concrete 

Our lineup of rigid connector angles (RCA) has a new addition with the RCA-C. The RCA-C is an ideal solution for attaching stud framing to concrete supports. This connector provides the most anchor options for attaching to concrete in comparison to other similar connectors on the market. The connector's design includes holes for a $1 ⁄ 2$ "-diameter anchor screw or bolt, or for two ¼"-diameter concrete screws, positioned in a wide array of fastening options - thus saving the installer the time and cost of drilling connector holes at the jobsite. In addition, the RCA connectors have been rigorously tested and load rated, giving you the confidence of quality and performance for your job.

## Features

- 2" $\times 2$ " legs provide plenty of room to make attachments to structure and stud framing.
- Multiple screw pattern options to stud framing for different load rating options.
- Heavy-duty shear and tension connector or light-duty moment connection.
- Pre-punched holes for attachment of screws to stud framing and attachment to concrete. Pre-punched holes on anchor leg provide options for (1) $1 / 20$ "-diameter anchor or (2) $1 / 44$ "-diameter anchors.
- Attachment to concrete or masonry can be achieved with $1 / 2$ "-dia. Titen HD ${ }^{\oplus}, 1 / 2$ "-dia. Strong-Bolt ${ }^{\oplus} 2,1 / 4$ "-dia. Titen HD, or $1 / 4$ "-dia. Titen Turbo ${ }^{T M}$.

Material: RCA-C - 97 mil (12 ga.), 50 ksi
Finish: Galvanized (G90)
Installation: Use all specified fasteners
Codes: Tested per ICC-ES AC261 and calculations per AISI RP18-4, AISI S100 or generally accepted industry standards. Visit strongtie.com for the latest load values and testing information.
Ordering information: RCA-C225/97-R55
(55 connectors per bucket)

Simpson Strong-Tie ${ }^{\star}$ Anchors for RCA-C Attachment to Concrete or Masonry

| Anchor Type | Anchor Diameter |
| :--- | :---: |
| Titen HD Heavy-Duty Screw Anchor | $1 / 22^{\prime \prime}$ or $1 / 4^{\prime \prime}$ |
| Strong-Bolt 2 Wedge Anchor | $1 / 22^{\prime \prime}$ |
| Titen Turbo Concrete and Masonry Screw Anchor | $1 / 4^{\prime \prime}$ |

| 1. For additional important information, visit strongtie.com. <br> 2. The designer is responsible for anchorage design. Reference Table 2 for anchorage solutions. <br> 3. See illustrations for fastener pattern placement. <br> 4. Tabulated values are based on framing members with track and stud of the same thickness and (1) \#10 screw into each stud flange unless otherwise noted. <br> 5. Tabulated moment values correspond to maximum connector strength without consideration of serviceability. The designer must check out-of-plane deflections using tabulated rotational stiffness. <br> 6. Tabulated connector rotational stiffness may be used for any wall heights. The designer must consider member deflection due to bending in the stud member. <br> 7. Per IBC 2021, 2018, 2015, 2012 Table 1604.3 footnote f , wind load is permitted to be taken as 0.42 times "component and cladding loads" for deflection checks. For IBC 2009 and earlier, the factor is 0.7 instead of 0.42. Tabulated values have not been adjusted. <br> 8. Allowable loads are based on cold-formed steel members with a minimum $F_{y}$ of 33 ksi and $\mathrm{F}_{\mathrm{u}}$ of 45 ksi for 43 mil ( 18 ga .) and thinner and a minimum $F_{y}$ of 50 ski and $F_{u}$ of 65 ksi for 54 mil ( $16 \mathrm{ga}$. .) and thicker. <br> 9. Connectors subjected to tension, shear and moment loads: $F_{2} / F_{2 \text { all }}+F_{4} / F_{4 \text { all }}$ $+M / M_{\text {all }} \leq 1.0 . F_{4}$ interaction with Moment not required to be checked for walls $2^{\prime}-0$ " or taller. <br> Where: $F_{2}, F_{4}$ and $M$ are the applied ASD tension, shear and moment, respectively. $F_{2 a l l}, F_{4 a l l}, M_{\text {all }}$ are the allowable tension, shear and moment from Table 1, respectively. <br> 10. Anchor tension, T , is the force in the anchor, or both anchors for two-anchor solutions, at maximum allowable, M, or maximum allowable tension, $F_{2}$. See Table 2 for pre-engineered anchorage solutions that incorporate anchor T into the solution. <br> 11. Anchor tension is calculated using AISC Steel Design Guide 1. The Anchor Bolt Design illustration (Figure B) shows the anchor tension, T, based on an applied moment, M . An illustration for the anchor tension, T , based on a vertical tension load, $F_{2}$, shown in Figure C. <br> 12. Anchor tension, T, may be interpolated. Examples: <br> - $\mathrm{M}_{\text {req }}=3,312 \mathrm{in}$. -lb . (given), fastener pattern 10C, 54 mil studs. <br> Anchor tension, T , at allowable moment $=(3,312 / 8,060) \times 1,910=785 \mathrm{lb}$. <br> - $T_{\text {req }}=525 \mathrm{lb}$. (given), fastener pattern 4A, 33 mil studs. Anchor tension, T, at allowable tension load, $F_{2}=(525 / 660) \times 755=601 \mathrm{lb}$. <br> 13. Tabulated anchor tension, $T$, is based on $f^{\prime} c=4,000$ psi. For $f^{\prime} c=3,000$ psi, use an increase factor of 1.05 . |  |  |  |  |  |  |  |  |  |  |

1. Anchor allowable loads have been determined using ACl 314-14 Chapter 17 anchorage calculations with the minimum concrete compressive strength, $\mathrm{f}^{\prime} \mathrm{c}$, and slab thickness listed. Sand-Lightweight Concrete is abbreviated as SLWC, Normal Weight Concrete is abbreviated as NWC.
2. Load values are for anchor based on ACl 318 -14, condition B, load factors from ACl 318 Section 5.3, no supplemental edge reinforcement, $\Psi_{\mathrm{C}, \mathrm{V}}=1.0$ for cracked concrete and periodic special inspection. Reference ICC-ES or IAPMO-UES evaluation reports for further information.
3. Allowable Stress Design (ASD) values were determined by multiplying calculated strength design values by a conversion factor, Alpha ( $\alpha$ ), of 0.7 for seismic loads and 0.6 for wind loads. ASD values for other load combinations may be determined using alternate conversion factors.
4. End distances are assumed as N/A perpendicular to load.
5. Tabulated allowable ASD loads for Wind and Seismic in SDC A and B are based on using wind conversion factors and may be increased by 1.17 for seismic SDC $A$ and $B$ only.
6. Allowable loads have been divided by an Omega ( $\Omega$ ) seismic factor of 2.5 for brittle failure as required by ACI 318-14 Chapter 17.
7. Tabulated capacities are based on maximum allowable anchorage loads only. The capacity of the connection system shall be the minimum of the tabulated value and the RCA-C allowable load value listed on Table 1.
8. Tabulated loads in Table 2 are based on $f^{\prime} c=4,000$ psi. For $f^{\prime} c=3,000$ psi, use an adjustment factor of 0.86 .
9. For anchor subjected to tension, shear and moment loads:
When $\left(F_{4} / F_{4 a l l}\right) \leq 0.2$
$\mathrm{F}_{2} / \mathrm{F}_{2 \mathrm{all}}+\mathrm{M} / \mathrm{M}_{\text {all }} \leq 1.0$

When $\left(F_{2} / F_{2 \text { all }}+M / M_{\text {all }}\right) \leq 0.2$
$\mathrm{F}_{4} / \mathrm{F}_{4 \mathrm{all}} \leq 1.0$
When $\left(F_{4} / F_{4 \text { all }}\right)>0.2$ and $\left(F_{2} / F_{2 a l l}+M / M_{\text {all }}\right)>0.2 \quad\left(F_{2} / F_{2 a l l}+M / M_{\text {all }}\right)+\left(F_{4} / F_{4 a l l}\right) \leq 1.2$ Where: $F_{2}, F_{4}$ and $M$ are the applied ASD tension, shear and moment, respectively. $F_{\text {2all }}, F_{4 \text { all }}, M_{\text {all }}$ are the allowable tension, shear and moment from Table 2, respectively.

## RCA-C Fastener Patterns

(1) $1 ⁄ 22^{1 "}$-Dia. Titen HD/Strong-Bolt 2

(2) $1 / 4^{1 "}$-Dia. Titen HD

| Pattern 4B | Pattern 8B | Pattern 10B |
| :---: | :---: | :---: |
|  |  | $\left[\begin{array}{ccc} 10 & \\ 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 \end{array}\right.$ |

| Pattern 4C | Pattern 8C | Pattern 10C |
|  | $5$ | $5$ |

## Example \#1: Exterior Parapet Stud

2018 IBC (ASCE 7-16) and AISI S240-15 and AISI S100-12 600S162-43 (33 ksi) stud @ 16" o.c. supported at base Parapet height, $L=24^{\prime \prime}$
Wind design pressure $=55.24$ psf (LRFD)
Deflection Limit, $\Delta$ allow $=$ L/240 (Ref. IBC Table 1604.3)
4,000 psi NWC uncracked, SDC A\&B, 3" edge

1. Determine ASD Wind Pressure:

$$
\begin{aligned}
& p=(0.6)(55.24 \mathrm{psf})=33.14 \mathrm{psf} \\
& w=(33.14 \mathrm{psf})(16 \mathrm{in} .)(1 \mathrm{ft} .11 \mathrm{in} .)=44.19 \mathrm{plf}
\end{aligned}
$$

## 2. Connector Moment Check:

$$
M_{\text {req }}=\frac{w L^{2}}{2}=\frac{(44.19 \mathrm{plf})(24 \mathrm{in} .)^{2}}{2\left(12 \frac{\mathrm{in.}}{\mathrm{ft} .}\right)}=1,061 \mathrm{in} .-\mathrm{lb} .
$$

From Table 1 for 600S162-43 (33ksi), 6" deep 43 mil stud:
Select RCA-C225/97 (Fastener Pattern 4A) with $1 / 21$ " $\phi$ anchor and
(4) \#10 screws, attaching to each stud @ 16" o.c.

Allowable Moment 1,380 in.-lb. > 1,061 in.-lb. OK

## 3. Check Deflection at Required Moment:

$\Delta_{\text {req }}=\Delta_{\text {stud }}+\Delta_{\text {connection }}=\frac{w L^{4}}{8 E I_{x e}}+\left(\frac{(0.7)\left(M_{\text {req }}\right)}{\beta}\right) L=$
$\Delta_{\text {rea }}=\left(\frac{\left(0.7 \times 44.19 \mathrm{plff}(1 \mathrm{ft.} / 12)(24 \mathrm{in} .)^{4}\right.}{8(29,500,000 \mathrm{psi})\left(2.32 \mathrm{in.} .^{4}\right)}\right)+\left(\frac{(0.7)(1,061 \mathrm{in.}-\mathrm{lb} .)}{165,000 \frac{\mathrm{in} .-\mathrm{lb} .}{\mathrm{rad} .}}\right) 24 \mathrm{in} .=0.002 \mathrm{in}+.0.108 \mathrm{in} .=0.110 \mathrm{in}$.
$\Delta_{\text {allow }}=\frac{2 L}{240}=\frac{2(24 \text { in. })}{240}=0.200 \mathrm{in} .>0.110 \mathrm{in}$. OK

## 4. Select Anchorage:

Normal weight concrete with $\mathrm{f}^{\prime} \mathrm{c}=4,000 \mathrm{psi}$
Table 2 - Uncracked concrete in SDC A\&B
(1) $1 / 2 "-$ dia. Titen $\mathrm{HD}^{\circledR}$ with $31 / 4^{" 1}$ embedment and $3^{\prime \prime}$ edge
$F_{4 \text { rea }}=\frac{(44.19 \mathrm{plf})(24 \mathrm{in.} .)}{\left(12 \frac{\text { in. }}{\mathrm{ft} .}\right)}=88.4 \mathrm{lb} . \quad F_{4 a l l}=1,305 \mathrm{lb} . \quad F_{4 \mathrm{req}} / F_{4 a l l}=0.07<1 \mathrm{OK}$
$M_{\text {req }}=1,061 \mathrm{in} .-\mathrm{lb}$.

$$
M_{\text {all }}=4,330 \text { in. }-\mathrm{lb} . \quad M_{\text {req }} / M_{\text {all }}=0.25<1 \text { OK }
$$

Notes:

1. 2018 IBC load combinations for ASD include a factor of 0.6 for wind loads.
2. Per IBC table 1604.3 footnote f, 0.42 factor can be used to calculate deflections for component and cladding wind loads for LRFD loads; ASD load conversion is 0.7 .

## Example \#2: Load-Bearing Wall with <br> Tension and Shear on Base Connector

- 2018 IBC (ASCE 7-16) and AISI S240-15 and AISI S100-12
- 600S162-33 (33 ksi) stud @ 16" o.c. load bearing condition
- Base connection 4,000 psi NWC uncracked, SDC A\&B, 3" edge (nearest fastener)
- Reactions $F_{2}=425 \mathrm{lb} ., \mathrm{F}_{4}=147 \mathrm{lb}$. (ASD Loads)

Select RCA-C225/97 (Fastener Pattern 4C) with (4) \#10 screws and (2) $1 / 4$ "-dia., $13 / 4$ " embedded Titen Turbo ${ }^{\text {™ }}$.

1. Determine Connector Allowables and Interactions (Reference Table 1 for Allowables):
$\mathrm{F}_{2 \text { req }}=425 \mathrm{lb}$.
$F_{2 \mathrm{all}}=660 \mathrm{lb}$.
$F_{2 \text { req }} / F_{2 a l l}=0.64<1$ OK
$F_{4 \mathrm{req}}=147 \mathrm{lb}$.
$\mathrm{F}_{4 \mathrm{all}}=480 \mathrm{lb}$.
$\mathrm{F}_{4 \mathrm{req}} / \mathrm{F}_{4 \mathrm{all}}=0.31<1 \mathrm{OK}$ Interaction $=0.95<1$ OK
2. Determine Anchorage Allowables and Interactions (Reference Table 2 for Allowables):
$F_{2 \text { req }}=425 \mathrm{lb}$.
$\mathrm{F}_{\text {2all }}=1,205 \mathrm{lb}$.
$\mathrm{F}_{2 \text { req }} / F_{\text {2all }}=0.35<1$ OK
$\mathrm{F}_{4 \mathrm{req}}=147 \mathrm{lb} . \quad \mathrm{F}_{4 \mathrm{all}}=520 \mathrm{lb} . \quad \mathrm{F}_{4 \mathrm{req}} / \mathrm{F}_{4 \text { all }}=0.28<1 \mathrm{OK}$ Interaction $=0.63<1.2 \mathrm{OK}$
